

Project Executable Files

Date	02 June 2026
Team ID	xxxxxx
Project Name	Rising waters
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Flood Prediction/

```

|
|— dataset/
|   |— flood_dataset.xlsx
|
|— models/
|   |— flood_model.pkl
|
|— templates/
|   |— index.html
|
|— notebooks/
|   |— Flood_Prediction.ipynb
|
|— app.py
|— requirements.txt
|— README.md
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed Yet
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	IBM Cloud / Local Flask Server
Repository Link	https://github.com/Bhargavi11111/rising-waters-project-.git
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install **Python 3.10+**.
2. Open the project folder in **VS Code** or **PyCharm**.
3. Install dependencies using:
 “pip install -r requirements.txt”
4. Ensure the trained model (flood_model.pkl) is available in the project folder.
5. Run the application:
 “python app.py”
6. Open the browser and visit:
 “http://127.0.0.1:5000”
7. Enter weather parameters and click **Predict** to view the flood prediction.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Real-time weather data is not integrated.	Future enhancement using Weather API
2	IBM Cloud deployment is optional and may require additional configuration.	Can be deployed after project completion.
3	Prediction accuracy depends on the quality of historical weather data.	Improve the model by using larger and more diverse datasets.
