Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

"I need an accurate system that can predict floods before they occur. Early warnings will help save lives and reduce property damage. Reliable predictions make disaster management more effective and improve emergency response."

THINKS

"I wonder whether the prediction results are reliable enough to make critical decisions. Better forecasting can reduce the impact of floods and help authorities prepare resources in advance. Machine learning can improve the accuracy of flood prediction."

DOES

"Regularly monitors rainfall and weather conditions, analyzes flood risk reports, coordinates with emergency response teams, issues warnings to vulnerable areas, and plans evacuation and relief activities whenever a high flood risk is predicted."

FEELS

"Feels responsible for protecting people living in flood-prone regions and is concerned about their safety. Gains confidence when accurate predictions support timely decision-making and feels satisfied when early warnings help minimize loss of life and property."

SAYS • Need accurate flood predictions. • Early alerts save lives. • Quick decisions are essential.	THINKS • Is the prediction reliable? • How can flood damage be reduced? • Resources must reach quickly.
PERSONA NAME Government Disaster Response Officer	
DOES • Monitors weather data. • Issues flood warnings. • Coordinates rescue teams.	FEELS • Concerned about public safety. • Responsible for communities. • Confident with accurate predictions.
