

Customer Journey Map

Date	02 July 2026
Team ID	xxxxxxx
Project Name	Rising waters
Maximum Marks	2 Marks

Customer Journey Map: Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	• Opens the Flask web application. • Enters rainfall, cloud visibility, and seasonal weather data. • Clicks the Predict button.	• Views the flood prediction result. • Reviews the prediction status and accuracy. • Understands the flood risk level.	• Issues early flood warnings. • Plans evacuation and resource allocation. • Monitors the affected areas for further action.
Touchpoint <i>What part of the service do they interact with?</i>	• Flood Prediction Web Application. • Weather data input form. • User interface.	• Prediction results page. • Machine learning prediction engine. • Risk classification display.	• Disaster Management Dashboard. • Emergency response teams. • Public warning system.
Customer Thought <i>What is the customer thinking?</i>	• "I hope the entered data is correct." • "The prediction should be accurate."	• "Can I trust this prediction?" • "How serious is the flood risk?"	• "Early action can save lives." • "Resources should be deployed quickly."

	• "This process should be simple."	• "Should I act immediately?"	• "Communities must be informed immediately."
Customer Feeling <i>What is the customer feeling?</i>	• Curious. • Hopeful. • Attentive.	• Confident if prediction is accurate. • Alert. • Responsible.	• Relieved. • Prepared. • Satisfied after timely action.
Process Ownership <i>Who is in the lead on this?</i>	Disaster Management Officer / Meteorologist	Machine Learning Prediction System (XGBoost Model)	Disaster Management Authority & Emergency Response Team
Opportunities <i>How can we improve this stage?</i>	• Simplify the data entry form. • Add automatic weather data collection. • Improve user experience.	• Improve model accuracy. • Display confidence score. • Reduce prediction time.	• Integrate SMS and Email alerts. • Deploy on IBM Cloud. • Add GIS-based flood visualization.
